Man-Way Covers & Support Rims

Constructed of Black High Density Polyethylene, these Man-Way covers are available in three different configurations: closed, with Inactive Vent or with Air Breather. A closed cover has no opening in the center. A cover with Inactive Vent has a plug in the center which can be removed to fill the tank. A cover with Air Breather also has a removable center, but unlike the Inactive Vent, the Air Breather has two barrels which allow air to flow in and out of the tank. Man-Way covers are installed by mechanically attaching the support ring to the tank and then screwing the lid into the ring. Available in F.D.A approved resins as well.
